IN THE CLAIMS:

Please cancel claims 9, 15, 24, and 30 without prejudice.

A rewritten version of the entire set of pending claims is as follows:

1. (Amended) A method in a data processing system for processing user input, the method comprising the data processing system implemented steps of:

displaying a first graphical widget on a display device within the data processing system, wherein the first graphical widget is displayed using a first size;

responsive to receiving a selected user interaction on the first graphical widget, displaying, using a second size, a second graphical widget on the display device in association with the first graphical widget for receiving user input, wherein the second size is larger than the first size; and

responsive to receiving a user input in the second graphical widget, removing the second graphical widget from the display device and inserting the user input into the first graphical widget.

2. (Amended) The method of claim 1, wherein the first graphical widget is configured to receive user input.

3. (Unchanged) The method of claim 1, wherein the second size is a percentage of the first size.

4. (Amended) The method of claim 1, wherein the first graphical widget is a text field for receiving user input.

5. (Amended) The method of claim 1, wherein the first graphical widget is a graphical control.

6. (Unchanged) The method of claim 1, wherein the data processing system is a personal digital assistant.

7. (Unchanged) The method of claim 1, wherein the data processing system is a personal computer.

8. (Unchanged) The method of claim 1, wherein the data processing system is a laptop computer.

10. (Amended) A method in a data processing system for processing user input, the method comprising the data processing system implemented steps of:

displaying an input field in a display in the data processing system, wherein the input field has a first size;

displaying a user input interface on the display, wherein the user input interface has a second size, in response to a user interaction requiring a resizing of the input field, wherein the second size is larger than the first size; and

responsive to receiving a user input in the user input interface, removing the user input interface from the display and inserting the user input into the input field.

11. (Unchanged) The method of claim 10 further comprising:

receiving additional user input in the input field.

12. (Amended) The method of claim 10, wherein the user interaction is a first user interaction and wherein the user input interface is removed responsive to a second user interaction at the completion of user input.

13. (Unchanged) The method of claim 10, wherein the data processing system is a personal digital assistant.

14. (Unchanged) The method of claim 10, wherein the data processing system is a portable computer.

16. (Amended) A data processing system for processing user input, the data processing system comprising:

first displaying means for displaying a first graphical widget on a display device within the data processing system, wherein the first graphical widget is displayed using a first size;

first resizing means, responsive to receiving a selected user interaction on the first graphical widget, for displaying a second graphical widget on the display device, using a second size, in association with the first graphical widget for receiving user input, wherein the second size is larger than the first size; and

second resizing means, responsive to receiving a user input in the second graphical widget, for removing the second graphical widget from the display device and inserting the user input into the first graphical widget.

17. (Amended) The data processing system of claim 16, wherein the first graphical widget is configured to receive user input.

18. (Unchanged) The data processing system of claim 16, wherein the second size is a percentage of the first size.

19. (Amended) The data processing system of claim 16, wherein the first graphical widget is a text field for receiving user input.

20. (Amended) The data processing system of claim 16, wherein the first graphical widget is a graphical control.

21. (Unchanged) The data processing system of claim 16, wherein the data processing system is a personal digital assistant.

22. (Unchanged) The data processing system of claim 16, wherein the data processing system is a personal computer.

23. (Unchanged) The data processing system of claim 16, wherein the data processing system is a laptop computer.

25. (Amended) A data processing system for processing user input, the data processing system comprising:

   displaying means for displaying an input field in a display in the data processing system, wherein the input field has a first size; and

   first resizing means for displaying a user input interface on the display, wherein the user input interface has a second size, in response to a user interaction requiring a resizing of the input field, wherein the second size is larger than the first size; and

   second resizing means, responsive to receiving a user input in the user input interface, for removing the user input interface from the display and inserting the user input into the input field.

26. (Unchanged) The data processing system of claim 25 further comprising:

   receiving means for receiving additional user input in the input field.

27. (Amended) The data processing system of claim 25, wherein the user interaction is a first user interaction and wherein the user input interface is removed responsive to a second user interaction at the completion of user input.

28. (Unchanged) The data processing system of claim 25, wherein the data processing system is a personal digital assistant.

29. (Unchanged) The data processing system of claim 25, wherein the data processing system is a portable computer.

31. (Amended) A computer program product in a computer readable medium for processing user input, the computer program product comprising:

first instructions for displaying a first graphical widget on a display device within the data processing system, wherein the first graphical widget is displayed using a first size;

second instructions, responsive to receiving a selected user interaction on the first graphical widget, for displaying, using a second size, a second graphical widget on the display device in association with the first graphical widget for receiving user input, wherein the second size is larger than the first size; and

third instructions, responsive to receiving a user input in the second graphical widget, for removing the second graphical widget from the display device and inserting the user input into the first graphical widget.

32. (Amended) A computer program product in a computer readable medium for processing user input, the computer program product comprising:

first instructions for displaying an input field in a display in the data processing system, wherein the input field has a first size;

second instructions for displaying a user input interface on the display, wherein the user input interface has a second size, in response to a user interaction requiring a resizing of the input field, wherein the second size is larger than the first size; and

third instructions, responsive to receiving a user input in the user input interface, for removing the user input interface from the display and inserting the user input into the input field.
